A tensorflow backend to SpiNNaker
More precisely: a keras backend to SpiNNaker

Jonas Fassbender

Supervisors:
Alan Stokes, Kevin Stratford, Caoimhín Laoide-Kemp

What is SpiNNaker?

What is SpiNNaker?

The project's website [Spi20] states:

[SpiNNaker is] a platform for high-performance massively parallel [and energy efficient] processing appropriate for the simulation of large-scale [spiking] neural networks [...]

Why use SpiNNaker as a target for training deep NNs?

Why use SpiNNaker as a target for training deep NNs?

- Amount of computation in training deep NNs increases exponentially (double every 3.4 months) [Dar19]

Why use SpiNNaker as a target for training deep NNs?

- ▶ Amount of computation in training deep NNs increases exponentially (double every 3.4 months) [Dar19]
- ▶ We'll run out of available computation (and energy) eventually

Why use SpiNNaker as a target for training deep NNs?

- ▶ Amount of computation in training deep NNs increases exponentially (double every 3.4 months) [Dar19]
- ▶ We'll run out of available computation (and energy) eventually
- ▶ Massively parallel, energy efficient and scalable systems are optimal for training NNs

What is tensorflow? And why the subtitle

What is tensorflow? And why the subtitle

- TensorFlow: Large-Scale Machine Learning on Heterogeneous Distributed Systems [Mar15]

What is tensorflow? And why the subtitle

- TensorFlow: Large-Scale Machine Learning on Heterogeneous Distributed Systems [Mar15]
- Basically: abstraction over various hardware and software libraries and APIs (CPUs, GPUs, TPUs, Eigen, MPI, CUDA, OpenCL, …)

What is tensorflow? And why the subtitle

- ▶ TensorFlow: Large-Scale Machine Learning on Heterogeneous Distributed Systems [Mar15]
- ▶ Basically: abstraction over various hardware and software libraries and APIs (CPUs, GPUs, TPUs, Eigen, MPI, CUDA, OpenCL, …)
- ▶ "Easiest" way to add new tensorflow backend? XLA (https://www.tensorflow.org/xla)

What is tensorflow? And why the subtitle

- ▶ TensorFlow: Large-Scale Machine Learning on Heterogeneous Distributed Systems [Mar15]
- ▶ Basically: abstraction over various hardware and software libraries and APIs (CPUs, GPUs, TPUs, Eigen, MPI, CUDA, OpenCL, …)
- ▶ "Easiest" way to add new tensorflow backend? XLA (`https://www.tensorflow.org/xla`)
- ▶ Instead: backend for keras (`https://keras.io`)

What is tensorflow? And why the subtitle

- ▶ TensorFlow: Large-Scale Machine Learning on Heterogeneous Distributed Systems [Mar15]
- ▶ Basically: abstraction over various hardware and software libraries and APIs (CPUs, GPUs, TPUs, Eigen, MPI, CUDA, OpenCL, …)
- ▶ "Easiest" way to add new tensorflow backend? XLA (https://www.tensorflow.org/xla)
- ▶ Instead: backend for keras (https://keras.io)
- ▶ Using high level conceptual graph (the actual layers of the NN) instead of low level computational graph of tensorflow

Challenges

Challenges

- Writing scientific programs is hard

Challenges

- Writing scientific programs is hard
- Writing programs for embedded hardware is hard

Challenges

- Writing scientific programs is hard
- Writing programs for embedded hardware is hard
- Both together? …

Overcoming them

Overcoming them

- Prepare myself well

Overcoming them

- Prepare myself well
- Taking stimulants and don't sleep for three months
